Mainframe Storage Performance DS8900:

- Senior z/OS performance managers have retired.
- COVOD-19 is causing enduring behavioral changes.
- New z/OS DASD performance features are arriving.
- For security reasons it is increasingly sensitive to export SMF data outside the Enterprise for processing and analysis.
- If disk response time is significant, <u>be aware someone is waiting</u>.

- If you are <u>looking for work</u> in z/OS performance management, now is the ideal time. **EADM** will accompany you and help you find modern solutions to issues encountered in modern mainframe shops. Maintaining lower disk response times helps reduce MSU consumption and therefore saves costs during z/OS invoicing.

EADM helps you optimize configurations and improve performance in the fields below. You will appreciate this simple tool which mines essential data from existing RMF.txt and CMF.txt files.
